E-BAG-S®

Autoclavable 121°C

Conf. UNI EN 13795

Conf.UNI EN 20811

E-BAG-S is the new system to transport and sterilize small surgical sets and rigid fiber optics. This special line of small bags to transport aseptic surgery tools has been designed to be used directly in steam sterilizers (via bagging) or only for the transportation of sterile medical instruments. This system allows it to be reused up to a maximum of 60 times. Its easy management, comparable to that of a coat for surgeons, makes it extremely flexible in the multiple uses of Operating Room.
